

SCHEME SATHI

AI-Driven Scheme Matching, Financial Assistance & Channel Partner
Discovery Platform

Complete Product Requirements Document (PRD) + Product Planning +
Technical Architecture

Version: 2.0 — Expanded SIH MVP

Date: August 25, 2026

Product Name: Scheme Sathi

Tagline: Find the Right Scheme. Find the Right Support.

1. Executive Summary

Scheme Sathi is a multilingual, AI-assisted digital platform designed to help marginalized and Scheduled Caste (SC) beneficiaries discover suitable government financial-assistance and educational schemes, understand their eligibility, estimate repayment obligations, and identify an appropriate authorized Channel Partner.

The platform addresses the information and navigation gap between beneficiaries and government financial-assistance programs.

The original PRD identifies three major problems:

- Fragmented scheme information
- Confusion around complex eligibility criteria
- Lack of transparency around official application routes

Scheme Sathi expands this into a complete journey:

Discover → Match → Understand → Calculate → Verify Documents → Find Partner → Apply → Track

The platform will be designed as a modern public-service application, taking inspiration from the overall UX structure and usability philosophy of myresume.gov.in, while using completely new branding, content, functionality and assets for Scheme Sathi.

It must NOT be a resume website clone.

It must NOT become a generic MyScheme clone.

Its primary differentiation is:

Intelligent financial-assistance matching + financial planning + Channel Partner discovery and routing.

2. Problem Statement

AI-Driven Scheme Matching for Marginalized Entrepreneurs

The government provides concessional financial assistance and educational loans to eligible Scheduled Caste beneficiaries.

However, beneficiaries often face difficulties understanding:

- Which scheme is suitable
- Whether they satisfy eligibility conditions
- How much financial assistance they can receive
- What their repayment could look like
- Which Channel Partner can process the application
- Where the nearest eligible Channel Partner is located
- Which documents are required
- How to proceed after identifying a scheme

The uploaded PRD similarly identifies information gaps, eligibility confusion and trust issues as core barriers.

3. Problem Gap

Scheme Sathi specifically addresses:

Gap 1 — Discoverability

Users do not know which scheme matches their circumstances.

Gap 2 — Eligibility Understanding

Eligibility conditions may involve:

- Income
- Age
- Occupation
- Category
- State
- Project purpose
- Education
- Disability
- Documents

Gap 3 — Financial Understanding

Users may not understand:

- Loan amount
- Interest rate
- EMI
- Moratorium
- Repayment period
- Own contribution

Gap 4 — Channel Partner Connectivity

Users may know a scheme but not know: "Where do I actually go to process this?"

Gap 5 — Partner Routing

A beneficiary needs an eligible and geographically appropriate Channel Partner rather than simply the nearest bank.

Gap 6 — Document Readiness

Users often don't know which documents they need before approaching an agency.

Gap 7 — Application Journey

Users need guidance after scheme discovery instead of being left at an external application link.

Gap 8 — Language & Accessibility

Users may be more comfortable with:

- Hindi
- Marathi
- Regional languages
- Voice interaction

4. Product Vision

Vision

Build a single digital companion that helps an eligible beneficiary move from:

"I need financial assistance."

to:

"I know which scheme suits me, how much assistance I may receive, what repayment could look like, what documents I need, and which authorized Channel Partner I should approach."

5. Product Positioning

Scheme Sathi is NOT:

- A resume builder
- A generic chatbot
- A simple scheme directory
- A generic EMI calculator
- A generic map application

Scheme Sathi IS:

A decision-support and navigation layer for government financial-assistance schemes.

6. Core Product Journey

The primary journey is:

7. Target Users

Primary Users

SC beneficiaries seeking:

- Business assistance
- Livelihood assistance
- Education loans
- Financial assistance
- Agriculture-related support

- Transport-related assistance
- Manufacturing/service-business support

The uploaded PRD identifies SC individuals as the primary audience and includes education, livelihood, housing and financial assistance use cases.

Secondary Users

- CSC operators
- NGO workers
- Family members
- Community facilitators
- Financial-literacy volunteers

8. Branding

Product

SCHEME SATHI

Tagline

Find the Right Scheme. Find the Right Support.

Brand Personality

- Trustworthy
- Simple
- Inclusive
- Transparent
- Government-service oriented
- Accessible
- Modern
- Multilingual

Design Principle

The website should feel like:

Modern Indian public digital infrastructure

rather than:

generic startup dashboard.

9. Reference Website Strategy

The reference website is used only for:

- Layout inspiration
- Navigation patterns
- Form experience
- Card structures
- Spacing
- Responsive behavior
- Onboarding flow
- Overall UX familiarity

The following must NOT be copied:

- MyResume branding
- Logo
- Proprietary graphics
- Resume-specific text
- Resume templates
- Resume content
- Proprietary assets
- Resume workflows

Scheme Sathi must have its own:

- Brand identity
- Information architecture
- Scheme content
- Icons
- Illustrations
- Terminology
- Financial-assistance workflows

10. Features to Remove from the Reference Concept

All resume-oriented features are excluded.

Remove

- Resume builder
- Resume editor
- Resume templates
- Resume preview
- Resume PDF generation
- Resume download
- Resume sharing
- Resume themes
- Resume font customization
- Resume colors
- Resume layout controls

- Resume ATS checker
- Resume keyword checker
- Resume score
- Resume portfolio
- Resume public URL
- Job search
- Recruiter functionality
- Career recommendations
- Resume analytics
- Resume-specific AI
- Resume completion score
- Resume sections
- Resume objective
- Resume skills section
- Resume experience builder
- Resume-specific onboarding

These are replaced by beneficiary-centric functionality.

11. Features to Retain from the UX Pattern

The following general UX patterns can remain:

- Responsive header
- Navigation
- Mobile menu
- Onboarding
- Progress indicator
- Forms
- Cards
- Dashboard
- Search
- Filters
- Notifications
- FAQ
- Profile
- Language selector
- Accessibility controls
- Footer
- Guided workflow

12. Feature Priority

P0 — Must Have

1. Smart Scheme Recommender
2. Eligibility Engine
3. Explainable Matching
4. Scheme Explorer
5. Scheme Details
6. Multilingual Interface
7. EMI Calculator
8. Channel Partner Locator
9. Partner Filtering
10. Nearest Eligible Partner
11. Firebase
12. User Profile
13. Document Checklist
14. Official Source Attribution
15. Mobile Responsive UI

P1 — High Value

1. AI Scheme Assistant
2. Voice Chat / Voice Input
3. Scheme Comparison
4. Project Cost Planner
5. Loan Financing Breakdown
6. Moratorium Calculator
7. Partner Match Score
8. No-Match Alternatives
9. Application Journey
10. Saved Schemes
11. Saved Partners
12. User Dashboard

P2 — Advanced

1. DigiLocker Integration
2. Document Verification
3. Application Status Tracking
4. Admin Portal
5. Analytics
6. Scheme Update Notifications
7. Personalized Reminders
8. Voice Output
9. Advanced AI/NLP

P3 — Future

1. WhatsApp integration
2. IVR
3. CSC integration
4. Live partner fund utilization
5. Real-time application integration
6. Advanced predictive analytics

13. Module 1 — Smart Scheme Recommender

Purpose

The recommender is the core of Scheme Sathi.

The uploaded PRD specifies a 6–8 question input flow and ranked scheme output.

User Assessment

Ask only information required for meaningful matching.

Personal

- State
- District
- Age
- Gender
- SC status/sub-category where relevant
- Annual family income

Occupation

- Student
- Farmer
- Worker
- Self-employed
- Unemployed
- Other

Education

- Below 10th
- 10th–12th
- Graduate
- Postgraduate

Requirement

- Business
- Education
- Agriculture

- Transport
- Manufacturing
- Services
- Livelihood
- Other

Financial

- Project cost
- Required assistance
- Own contribution

Optional

- Disability status
- Existing business
- New business
- Business experience

14. Conversational Assessment

The questionnaire should work in two modes:

Mode A

Traditional form.

Mode B

Conversational assistant.

Example:

Scheme Sathi: What do you need financial assistance for?

User: I want to start a tailoring business.

Scheme Sathi: Approximately how much will your project cost?

User: Around ₹3 lakh.

The system converts the conversation into structured fields.

15. Recommendation Engine

Architecture:

Initial implementation: Rule-based engine

Future: Rule-based + ML/NLP hybrid

The original PRD also proposes a rule-based + ML hybrid architecture.

16. Matching Factors

Potential factors:

- Category
- Income
- Age
- State
- District
- Occupation
- Education
- Purpose
- Project cost
- Loan requirement
- Scheme category
- Document availability

17. Match Score

Example:

Income Match	20
Category Match	20
Purpose Match	20
Loan Amount Match	20
Age Match	10
Location Match	10
Total	100

Display:

92% Strong Match

Important: The score must be described as:

Indicative matching score

and never as an official approval decision.

18. Explainable Matching

Every recommendation must answer: Why was this recommended?

Example:

- ✓ Your income falls within the listed range.
- ✓ Your project type matches the scheme purpose.
- ✓ Your requested amount is within the listed limit.
- ✓ Your location is covered.

19. Why Not This Scheme?

If a scheme is rejected:

Not recommended. Reason: Your requested loan amount exceeds the listed maximum assistance under this scheme.

Then provide alternatives where possible. This is important for transparency.

20. Recommendation Result

Display 5-10 ranked schemes where appropriate.

Each card:

- Scheme name
- Match score
- Ministry/authority
- Purpose
- Maximum assistance
- Interest rate where applicable
- Moratorium
- Repayment
- Eligibility
- Documents
- Official source
- Apply / Learn More
- Find Partner

The original PRD specifies ranked scheme output with benefits, matching reasons, documents and official application links.

21. Module 2 — Scheme Explorer

Route: /schemes

Features:

- Search
- Category filter
- State filter
- Income filter
- Amount filter
- Purpose filter
- Education/business filter
- Sorting

22. Scheme Details

Route: /schemes/:id

Sections:

- Overview
- Eligibility
- Financial Assistance
- Interest Rate
- Loan Limits
- Moratorium
- Repayment
- Required Documents
- Who Can Apply?
- Channel Partners
- Application Process
- Official Source
- Last Updated
- Disclaimer

23. Module 3 — Scheme Comparison

Allow users to select multiple schemes. Compare:

- Purpose
- Eligibility
- Maximum assistance
- Interest

- Repayment
- Moratorium
- Own contribution
- Required documents
- Partner availability
- Match score

24. Module 4 — EMI Calculator

Route: /calculator

Inputs

- Loan amount
- Interest rate
- Tenure
- Moratorium

Outputs

- EMI
- Total principal
- Total interest
- Total repayment

Formula

$$EMI = P \times r \times (1+r)^n / [(1+r)^n - 1]$$

Where: P = principal, r = monthly interest rate, n = number of installments

25. Scheme-Aware EMI

From a scheme page: "Calculate My EMI"

Automatically load:

- Applicable loan amount
- Interest
- Tenure
- Moratorium

The calculator must clearly state when a calculation is illustrative.

26. Moratorium Calculator

Explain:

- Moratorium duration
- Repayment start

- Possible repayment impact

Do not assume identical repayment treatment for every scheme. Use official scheme rules where available.

27. Project Cost Planner

Entrepreneurs can construct their project budget:

Equipment	₹1,00,000
Raw Materials	₹75,000
Rent	₹50,000
Working Capital	₹50,000
Other	₹25,000
Total	₹3,00,000

The total can be passed directly to the recommendation engine.

28. Financing Breakdown

Show:

Total Project Cost	₹5,00,000
Possible Scheme Finance	₹4,50,000
Possible Own Contribution	₹50,000

Values must come from verified scheme rules.

29. Module 5 — Channel Partner Locator

Route: /partners

This is one of the major Scheme Sathi differentiators.

Partner categories:

- State Channelizing Agencies
- Public Sector Banks
- Regional Rural Banks
- NBFC-MFIs
- Other authorized partners

30. Partner Data

Each partner:

- name
- type
- address
- state
- district
- latitude
- longitude
- phone
- email
- supportedSchemes
- supportedCategories
- status
- availability
- lastUpdated
- officialSource

31. Partner Filtering

Filter by:

- Scheme
- Loan type
- State
- District
- Distance
- Partner type
- Availability

32. Partner Routing

The system should NOT simply return: nearest bank.

It should return: nearest eligible Channel Partner for this scheme and requirement.

Process:

33. Partner Match Score

Example:

Scheme compatibility	40%
Location coverage	25%
Loan category	20%
Distance	10%
Availability	5%

Display:

94% Partner Match

34. Live Fund/NPA Data

The PS refers to partner fund utilization and NPA/overdue considerations.

However: Never fabricate live financial data.

If official real-time information is unavailable, display:

Partner availability is based on the latest available verified information.

Include: Last updated: [date]

Demo/mock partner availability may be used only when clearly labelled as synthetic/demo data.

The uploaded PRD also recognizes that real-time Channel Partner data may not be publicly available and proposes mock data for demonstrations.

35. Map

Use:

- React Leaflet
- OpenStreetMap-compatible mapping

Map features:

- Current location
- Partner markers

- Search
- Filters
- Map/list toggle
- Distance
- Partner details
- Directions

Avoid unnecessary dependence on Google Maps API.

36. Distance Calculation

Use latitude/longitude to calculate approximate distance.

For MVP: nearest eligible partner = geographic distance + eligibility filters

Advanced routing can be added later.

37. Module 6 — Voice Chat

Voice interaction is a new Scheme Sathi feature.

Voice Input

User taps: "Talk to Scheme Sathi"

Example:

"Mujhe teen lakh ka business loan chahiye."

The system extracts:

- Purpose = Business
- Requested Amount = ₹3,00,000
- Language = Hindi/Hinglish

Then continues the assessment.

38. Voice Conversation

Example:

Scheme Sathi: Aapka annual family income kitna hai?

User: Teen lakh.

System: Aap Maharashtra mein rehte hain?

User: Haan.

System: Aapke liye kuch suitable schemes mil gayi hain.

39. Voice Output

Optional text-to-speech:

"Aapke profile ke according teen schemes potentially suitable hain."

Languages:

- English
- Hindi
- Marathi
- Future regional languages

40. Voice Architecture

Preferred architecture:

Browser-native speech capabilities may be used where appropriate to minimize API cost.

An external speech API should only be introduced if better multilingual reliability is required.

41. Module 7 — AI Scheme Assistant

The assistant should not be a generic chatbot. It should operate on verified Scheme Sathi data.

User: "Mujhe ₹5 lakh chahiye."

Assistant: "Aap loan kis purpose ke liye chahte hain?"

Then:

Assistant: "Aapki annual family income kya hai?"

Then:

Assistant: "Based on the information you've provided, these schemes may be relevant."

The AI should never invent:

- Scheme benefits
- Eligibility
- Interest rates
- Loan limits
- Government policies

42. AI Safety Rule

If information cannot be verified:

"I couldn't verify this information from the available official source."

Never hallucinate government benefits.

43. Module 8 — Document Checklist

For each scheme:

Required Documents

- ✓ Aadhaar
- ✓ SC Certificate
- ✓ Income Certificate
- ☐ Project Report
- ☐ Bank Documents

Show: 3/5 documents ready

44. Module 9 — DigiLocker Integration

DigiLocker is an important addition for Scheme Sathi because document readiness and verification are major friction points.

Objective

Allow users, where supported and authorized, to retrieve eligible government-issued documents through DigiLocker rather than manually uploading documents.

Potential documents may include:

- Aadhaar-related documents where legally/API-supported
- Educational certificates
- Caste/community certificates
- Income-related certificates
- Other digitally issued documents

The exact document types available must depend on the user's DigiLocker account and the issuing authority.

45. DigiLocker User Flow

46. DigiLocker Security

Never:

- Ask users for DigiLocker passwords
- Store DigiLocker credentials
- Bypass DigiLocker consent
- Scrape DigiLocker
- Store unnecessary documents

Use the official authorized integration mechanism.

The integration should follow DigiLocker/API-setu authorization requirements and applicable policies.

47. DigiLocker Benefit

Instead of: "Upload your caste certificate."

Show: "Get from DigiLocker"

Then:

- ✓ Document found
- ✓ Issuer verified
- ✓ Available for this application

Only make a "verified" claim when the underlying source actually provides verification.

48. DigiLocker Fallback

If DigiLocker integration isn't available for a particular document:

DigiLocker unavailable for this document. Upload manually.

This ensures the application remains functional.

49. Module 10 — Application Journey

After selecting a scheme:

Unless an official application-status API is integrated, these should be treated as user-managed guidance/tracking statuses, not official government statuses.

50. Module 11 — User Dashboard

Route: /dashboard

Show:

- My Recommendations
- Saved Schemes
- Saved Partners
- Recent Calculations
- Document Readiness
- Application Journey
- Assessment History

51. Module 12 — Multilingual System

Initial: English, Hindi, Marathi

Architecture:

```
src/locales/  
  en.json  
  hi.json  
  mr.json
```

Every interface string must use translation keys.

The original PRD calls for multilingual support and mobile-first accessibility.

52. Accessibility

Target:

- Keyboard navigation
- Readable typography
- Proper labels
- Screen-reader compatibility
- Focus states
- High contrast
- Large touch targets
- Simple language

Because users may have limited digital literacy, avoid:

- Complicated terminology
- Dense forms
- Unnecessary fields
- Technical jargon

53. Low-Bandwidth Design

The uploaded PRD explicitly requires mobile-first and low-bandwidth optimization. Therefore:

- Minimize large images
- Lazy-load maps
- Compress assets
- Use text-first layouts
- Avoid unnecessary video
- Cache static data
- Optimize JavaScript bundles

54. Home Page

Hero

Find the Right Government Scheme for You

Subheading

Scheme Sathi helps you discover suitable financial assistance, understand eligibility, calculate repayment and find the right Channel Partner.

Primary: Find My Scheme

Secondary: Explore Schemes

Third: Talk to Scheme Sathi

55. Home Page Sections

1. Hero
2. How It Works
3. Smart Scheme Matching
4. Financial Calculator
5. Partner Locator
6. Voice Assistant
7. DigiLocker Document Assistance
8. Popular Schemes
9. Financial Literacy
10. FAQ
11. Trust / Official Sources
12. Footer

56. How It Works

01 — Tell Us

Answer a few simple questions.

02 — Get Matched

Scheme Sathi identifies potentially suitable schemes.

03 — Understand

See eligibility, assistance, documents and repayment.

04 — Find Support

Find an eligible Channel Partner.

05 — Get Ready

Prepare documents using manual upload or DigiLocker where available.

57. Admin Portal

Route: /admin

Scheme Management

- Add
- Edit
- Verify
- Deactivate
- Update
- Source tracking

Partner Management

- Add
- Edit
- Location
- Supported schemes
- Status
- Availability

Data Management

- Source
- Last updated
- Verification status

Analytics

- Scheme searches
- Recommendations
- No-match cases
- Calculator usage
- Partner searches
- Language usage
- User completion rate

58. Firebase Architecture

Use Firebase as the primary backend. Components:

- Firebase Authentication
- Firestore
- Firebase Storage where necessary
- Cloud Functions where necessary
- Firebase Hosting

59. Firestore Collections

- users
- schemes
- schemeRules
- partners
- partnerSchemes
- recommendations
- assessments
- savedSchemes
- savedPartners
- calculatorHistory
- documents
- applicationJourneys
- categories
- translations
- adminUsers

60. Scheme Document Model

```
{
  name,
  slug,
  description,
  ministry,
  category,
  purpose,
  targetBeneficiaries,
  minIncome,
  maxIncome,
  minAge,
  maxAge,
  minLoanAmount,
  maxLoanAmount,
  interestRate,
  moratoriumMonths,
  repaymentMonths,
  eligibilityRules,
  requiredDocuments,
  channelPartnerTypes,
  officialSource,
  sourceLastUpdated,
  isVerified,
  isActive
}
```

61. Partner Model

```
{
  name,
  type,
  address,
  state,
  district,
  latitude,
  longitude,
  phone,
  email,
  supportedSchemes,
  supportedCategories,
  status,
  availability,
  lastUpdated,
  officialSource
}
```

62. User Model

Store only information necessary for product functionality. Potential fields:

```
{  
  uid,  
  preferredLanguage,  
  state,  
  district,  
  profilePreferences,  
  savedSchemes,  
  savedPartners,  
  createdAt  
}
```

Sensitive assessment information should be handled carefully and retained only where necessary.

63. Privacy Architecture

The original PRD specifies no PII storage/session-based processing for its MVP.

The expanded Scheme Sathi dashboard requires limited persistent data for:

- Saved schemes
- Saved assessments
- Document readiness
- Application journey

Default Principle

Collect the minimum data required.

Don't Collect

- Unnecessary Aadhaar numbers
- Passwords
- Unnecessary financial details
- Unnecessary personal documents

For DigiLocker

Store only what is necessary and legally permitted.

64. Security

Implement:

- Firebase Authentication
- Firestore Security Rules
- Role-based admin access
- Protected routes
- Input validation
- Rate limiting where applicable
- Secure environment variables

- No secrets in Git
- Audit-friendly admin actions
- HTTPS

65. API Strategy

Required/Primary — Firebase

For backend services.

MCP / Official Government Sources

For research/data acquisition where available.

Leaflet + OpenStreetMap-compatible data

For maps.

66. Optional APIs

AI API

For advanced conversational AI.

Speech API

Only if browser speech functionality is insufficient.

Routing API

Only if advanced navigation is needed.

DigiLocker/API Setu

For authorized DigiLocker integration.

67. API Key Strategy

Minimum MVP should aim for: 1–2 credentials/configurations

Potential: Firebase, MCP/government source

Optional: LLM API, DigiLocker/API Setu credentials, External maps/routing

Do not create unnecessary API dependencies.

68. Map API Strategy

Do not automatically use Google Maps.

Preferred MVP: React Leaflet + OpenStreetMap-compatible mapping

For simple distance calculation: No external routing API is required.

69. Government Data Architecture

The preferred data flow is:

Do NOT make the frontend dependent on a live MCP request for every page load.

70. Data Trust Model

Every scheme should have: Official Source, Last Updated, Verification Status

Example:

Source	Official government portal
Last Updated	25 Aug 2026
Status	Verified

If not verified:

Information not independently verified.

71. Mock Data Policy

Synthetic data may be used for:

- Demo partner availability

- Unavailable APIs
- Prototype analytics

But every synthetic value must be labelled: Demo data

Never present fictional partner fund availability as real government information.

72. AI + Rule Engine Architecture

Recommended:

AI should assist the interaction. The actual eligibility logic should remain transparent.

73. Project Structure

```

```

76. Performance Requirements

Original PRD Target

- Under 3 seconds result response after input
- Support approximately 1,000 concurrent demo users

Expanded Target

Recommendation result: <3 seconds for local/rule-based matching.

Full journey: <30 seconds for assessment-to-result under normal conditions.

The original success target also specifies <30 seconds end-to-end.

77. Success Metrics

User Completion Rate

Target: 70%

Match Precision

Target: 85% validated against manual eligibility review.

Time to Result

Target: <30 seconds

User Satisfaction

Target: 4/5

These targets are derived from the uploaded PRD.

Additional Scheme Sathi Metrics

Partner Discovery

80% of eligible users can identify at least one potential partner.

Document Readiness

60% of users can identify required documents.

Calculator Usage

Measure users who calculate repayment after scheme recommendation.

Voice Completion

Measure successful voice-based assessment completion.

78. Testing

Recommendation Engine

- Income exactly at limit
- Income above limit
- Project cost exactly at limit
- Project cost above limit
- Age boundary
- State mismatch
- Purpose mismatch
- Category mismatch
- Missing data

Calculator

- Zero loan
- Invalid rate
- Invalid tenure
- Boundary loan values
- Moratorium

Partner

- No partner
- One partner
- Multiple partners
- Unsupported scheme
- Location unavailable
- Partner unavailable

Voice

- English
- Hindi
- Hinglish
- Marathi
- Accents
- Unclear speech
- Silence
- Microphone denial

DigiLocker

- Successful authentication
- No documents
- Unsupported document
- User cancellation
- Consent failure
- API failure

79. Error States

Every operation must have:

Loading

"Finding suitable schemes..."

Empty

"No schemes matched your current information."

Error

"We couldn't retrieve the latest information. Please try again."

No Partner

"No eligible Channel Partner was found in the selected area."

Voice Error

"We couldn't understand that. You can type your answer instead."

DigiLocker Error

"We couldn't retrieve your document from DigiLocker. You can upload it manually."

80. Official Disclaimer

Display:

Scheme Sathi is an informational and decision-support platform. Scheme recommendations are indicative and do not constitute official eligibility or approval. Final eligibility, sanction, interest rates, loan limits, documentation requirements and application decisions are determined by the concerned government authority and authorized Channel Partner.

81. SIH Demonstration Flow

The primary live demo should be:

Step 1

Landing page. Click: Find My Scheme

Step 2

Choose: Start a Business

Step 3

Enter: State, Income, Category, Project cost, Age

Step 4

Scheme Sathi generates: 3 Potential Matches

Step 5

Open top recommendation. Show: eligibility, financing, interest, moratorium, documents.

Step 6

Click: Calculate My EMI

Step 7

Show: EMI, total interest, repayment.

Step 8

Click: Find My Channel Partner

Step 9

Map displays: eligible partners, distance, partner type.

Step 10

Select nearest partner.

Step 11

Show: Document Checklist

Step 12

Click: Get Documents from DigiLocker

Step 13

Demonstrate document retrieval/connection where the authorized integration is available, or use a clearly labelled demo flow.

Step 14

Click: Talk to Scheme Sathi. Demonstrate voice interaction.

This single journey demonstrates nearly the entire PS.

82. MVP Development Phases

Phase 1 — Reference & Design

Analyze the reference website's: layout, navigation, forms, cards, spacing, mobile behavior. Then create the Scheme Sathi design system.

Phase 2 — Foundation

Build: React, Vite, TypeScript, Tailwind, routing, Firebase, project architecture.

Phase 3 — Scheme Data

Connect MCP/official sources. Create: normalized schema dataset, eligibility rules, source metadata, verification metadata.

Phase 4 — Recommender

Build: questionnaire, rule engine, scoring, ranking, explanation.

Phase 5 — Scheme Explorer

Build: search, filters, details, comparison.

Phase 6 — Financial Tools

Build: EMI, moratorium, project planner, financing breakdown.

Phase 7 — Partner Locator

Build: map, partner database, filtering, distance, routing.

Phase 8 — Voice

Build: microphone, speech recognition, structured input, voice response.

Phase 9 — DigiLocker

Implement authorized integration if credentials/API access are available. Otherwise: create the integration abstraction and demo-safe fallback.

Phase 10 — Dashboard

Build: saved schemes, saved partners, assessments, document readiness, application journey.

Phase 11 — Admin

Build: schemes, partners, data verification, analytics.

Phase 12 — Testing & Polish

Perform: mobile testing, accessibility, performance, security, edge-case testing, demo testing.

83. GitHub Development Strategy

Recommended commits:

```
feat: initialize Scheme Sathi
feat: add design system
feat: add responsive navigation
feat: add Firebase integration
feat: add scheme data model
feat: add scheme explorer
feat: add eligibility engine
feat: add scheme recommendation
feat: add explainable match score
feat: add scheme comparison
feat: add EMI calculator
feat: add project cost planner
feat: add partner locator
feat: add partner filtering
feat: add multilingual support
feat: add voice assistant
feat: add DigiLocker integration
feat: add user dashboard
feat: add admin portal
test: add recommendation tests
test: add calculator tests
fix: resolve mobile issues
docs: update README
```

84. Environment Variables

Start with:

```
VITE_FIREBASE_API_KEY=
VITE_FIREBASE_AUTH_DOMAIN=
VITE_FIREBASE_PROJECT_ID=
VITE_FIREBASE_STORAGE_BUCKET=
VITE_FIREBASE_MESSAGING_SENDER_ID=
VITE_FIREBASE_APP_ID=
```

Optional:

```
GEMINI_API_KEY=
VOICE_API_KEY=
DIGILOCKER_CLIENT_ID=
DIGILOCKER_CLIENT_SECRET=
MAPS_API_KEY=
```

Only add variables when the corresponding integration is actually used. Never commit .env.

85. Data Source Priority

Tier 1 — Official

- Government portals
- Official scheme sources
- Authorized APIs
- Authorized DigiLocker/API integrations

Tier 2

- Official open datasets

Tier 3

- Curated secondary datasets for development

Tier 4

- Synthetic demo data

Clearly identify Tier 3/4 data.

86. Important Data Rule

Never invent:

- Loan limits
- Interest rates
- Income limits
- Eligibility
- Partner availability
- Fund availability
- NPA status
- Government benefits

If information isn't verified:

Not available / Unable to verify.

87. What Makes Scheme Sathi Different

The competitive differentiation should be:

Existing Information Discovery

Search

Scheme Sathi

This is the central product story.

88. Five Core Value Propositions

1. Discover — Find schemes you may qualify for.
2. Understand — Know why the scheme matches you.
3. Calculate — Understand potential repayment.
4. Connect — Find the right Channel Partner.
5. Prepare — Get documents and application guidance ready.

89. Final Feature Matrix

Feature	Priority	PS Alignment
Scheme Recommender	P0	High
Eligibility Engine	P0	High
Explainable Match	P0	High
Scheme Explorer	P0	High
Scheme Details	P0	High

Feature	Priority	PS Alignment
EMI Calculator	P0	High
Moratorium Calculator	P0	High
Partner Locator	P0	High
Partner Filtering	P0	High
Nearest Eligible Partner	P0	High
Multilingual	P0	High
Firebase	P0	Medium
Document Checklist	P0	High
Scheme Comparison	P1	Medium
AI Assistant	P1	High
Voice Chat	P1	High
Project Cost Planner	P1	High
Financing Breakdown	P1	High
No-Match Alternatives	P1	High
Application Journey	P1	Medium
User Dashboard	P1	Medium
DigiLocker	P2/P1 if available	High
Admin Dashboard	P2	Medium
Analytics	P2	Low
Notifications	P2	Low
WhatsApp	P3	Medium
IVR	P3	Medium
Real-time Partner Funds	P3	High

90. Final Architecture

RECOMMENDATION + FINANCIAL + PARTNER ENGINES

SCHEME SATHI FRONTEND (Form, Voice, AI, Map, DigiLocker)

USER JOURNEY: Match → Understand → Calculate → Connect → Apply

91. Final Product Experience

The user should be able to say:

"Mujhe business start karna hai."

Scheme Sathi should respond:

"Let's find the right scheme for you."

Then:

What do you need? — Business

Project Cost? — ₹3,00,000

Annual Family Income? — ₹3,00,000

State? — Maharashtra

Category? — SC

Then: 3 potential matches found

Scheme A	92% match
Scheme B	84% match
Scheme C	76% match

Then: Why Scheme A?

- ✓ Income matches
- ✓ Purpose matches
- ✓ Loan amount matches
- ✓ Location matches

Then: Financial Assistance

Potential assistance	X ₹
Interest	X %
Moratorium	X months

Then: Calculate EMI

Then: Required Documents

- ✓ Aadhaar
- ✓ SC Certificate
- ☐ Income Certificate
- ☐ Project Report

[Get from DigiLocker]

Then: Find Channel Partner

Partner A	3.2 km
Partner B	5.8 km
Partner C	8.1 km

Then: "Partner A is the closest eligible partner for your selected scheme."

Finally: Start Application Journey

This is the experience that Scheme Sathi should be built around.

92. Final SIH Pitch

One-line Pitch

Scheme Sathi is an AI-assisted financial-assistance navigator that helps SC beneficiaries discover the right government scheme, understand their eligibility, estimate repayment, prepare documents, and connect with the right Channel Partner.

Short Pitch

Government schemes exist, but finding the right scheme, understanding eligibility, arranging documents, calculating repayment and identifying the correct Channel Partner can be difficult. Scheme Sathi brings these steps into one multilingual platform — transforming fragmented scheme information into a personalized journey from discovery to financial planning to partner connectivity.

93. Final Development Principle

The project should be built around this sentence:

"Don't just tell the citizen which schemes exist. Tell them which scheme may fit their situation, why it fits, what it could mean financially, what they need, and where they should go next."

That is the core identity of Scheme Sathi.

94. Scope Control

If development time becomes limited, do NOT sacrifice the core flow. Keep:

Scheme Match

Can temporarily defer:

- Advanced ML
- Advanced voice
- Real-time fund data
- Application API integration
- Advanced analytics
- WhatsApp
- IVR

The uploaded original PRD intentionally recommends strict scope control because data integration and partner availability introduce significant complexity.

For the expanded Scheme Sathi version, DigiLocker should similarly be treated as integration-dependent: design the architecture now, but don't let it block the core recommendation → calculator → partner journey.

95. Definition of Done

Scheme Sathi is considered ready for the SIH demo when:

- Homepage is complete
- Scheme Explorer works
- 50+ curated/verified scheme records or an appropriately scoped verified dataset is available
- Recommendation engine works
- Match explanations work
- No-match explanation works
- Scheme details work
- EMI calculator works
- Moratorium handling is implemented appropriately
- Project cost planner works
- Partner map works
- Partner filtering works
- Nearest eligible partner works
- English/Hindi/Marathi UI works
- Firebase authentication works

- User dashboard works
- Document checklist works
- Voice input works or has a clearly documented fallback
- DigiLocker integration architecture is implemented
- DigiLocker works if authorized credentials/access are available
- Manual document upload fallback works
- Admin can manage schemes/partners
- Official sources are displayed
- Data freshness is visible
- No fake government data is presented as official
- Mobile UI works
- Build passes
- No TypeScript errors
- Firestore rules are configured
- .env is excluded from Git
- Demo flow works end-to-end

SCHEME SATHI

Find the Right Scheme. Find the Right Support.

Discover → Match → Understand → Calculate → Prepare → Connect → Apply

The platform combines: AI-assisted Scheme Matching + Explainable Eligibility + Financial Calculator + Project Planner + Voice Chat + DigiLocker Document Assistance + Geo-Spatial Channel Partner Discovery + Multilingual Accessibility + Application Journey into one unified citizen-facing experience.
